

EXTERNAL-CHARACTER FONT CREATION SYSTEM
AND PROGRAM RECORDING MEDIUM THEREFOR

5

ABSTRACT OF THE DISCLOSURE

10 A system that can register a plurality of kinds of
fonts for one external character and can create an
external-character file for each font, in a short time,
is provided.

15 The external-character font creation system
includes: a display unit 2 for displaying an external-
character code registration screen based on an external-
character code table 6 that shows a correspondence
between an external-character code of a external
20 character to be registered and a master code; an edit
unit 11 for registering a master code corresponding to an
external-character code in the external-character code
table 6; a font selecting section 13 for selecting a
plurality of external-character fonts of the external-
character file by using a font selection screen for
selecting an external-character font of an external-
25 character file to be created based on a correspondence
relationship between a master font and an external-
character font; and an external-character file creating
section 16 for creating an external-character file of the
external-character font selected by the font selecting
30 section 13.
